IMPORTANT SAFETY INSTRUCTIONS

1. READ these instructions.
2. KEEP these instructions.
3. HEED all warnings.
4. FOLLOW all instructions.
5. DO NOT use this apparatus near water.
6. CLEAN ONLY with dry cloth.
7. DO NOT block any ventilation openings. Allow sufficient distances for adequate ventilation and install in accordance with the manufacturer’s instructions.
8. DO NOT install near any heat sources such as open flames, radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat. Do not place any open flame sources on the product.
9. DO NOT defeat the safety purpose of the polarized or grounding type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wider blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. PROTECT the power cord from being walked on or pinched, particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. ONLY USE attachments/accessories specified by the manufacturer.
12. USE only with a cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13. UNPLUG this apparatus during lightning storms or when unused for long periods of time.
14. REFER all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

Explanation of Symbols

- Caution: risk of electric shock
- Caution: risk of danger (See note.)
- Direct current
- Alternating current
- On (Supply)
- Equipment protected throughout by DOUBLE INSULATION or REINFORCED INSULATION
- Stand-by
- Equipment should not be disposed of in the normal waste stream

WARNING: Voltages in this equipment are hazardous to life. No user-serviceable parts inside. Refer all servicing to qualified service personnel. The safety certifications do not apply when the operating voltage is changed from the factory setting.

WARNING: Battery packs shall not be exposed to excessive heat such as sunshine, fire, or the like.

WARNING: Danger of explosion if incorrect battery replaced. Operate only with AA batteries.

WARNING: This product contains a chemical known to the State of California to cause cancer and birth defects or other reproductive harm.

WARNING: Battery packs may explode or release toxic materials. Risk of fire or burns. Do not open, crush, modify, disassemble, heat above 140°F (60°C), or incinerate.

- Follow instructions from manufacturer
- Never put batteries in mouth. If swallowed, contact your physician or local poison control center
- Do not short circuit; may cause burns or catch fire

• Do not charge or use battery packs with other than specified Shure products
• Dispose of battery packs properly. Check with local vendor for proper disposal of used battery packs

Note:

- This equipment is intended to be used in professional audio applications.
- EMC conformance is based on the use of supplied and recommended cable types. The use of other cable types may degrade EMC performance.
- Use this battery charger only with the Shure charging modules and battery packs for which it is designed. Use with other than the specified modules and battery packs may increase the risk of fire or explosion.
- Changes or modifications not expressly approved by Shure Incorporated could void your authority to operate this equipment.
Note: Use only with the included power supply or a Shure-approved equivalent.

System Overview

GLX-D Advanced Digital Wireless Systems combine Automatic Frequency Management technology with a rack mountable metal receiver, rechargeable lithium-ion batteries, world-renowned microphones, and unparalleled design and construction. New GLX-D Advanced Frequency Managers (available separately) connect multiple GLXD4R receiver systems for increased channel count and improved RF reliability, consolidating RF to one pair of antennas. New antenna accessories help improve reception by letting you mount antennas closer to transmitters, with directional reception for improved performance. Available in a variety of bodypack and handheld configurations, GLX-D Advanced Digital Wireless sets the standard for ease of operation and digital audio clarity.

Features

- Exceptional digital audio clarity
- Operates in globally unlicensed 2.4 GHz spectrum
- Optional GLX-D Frequency Manager allows operation of up to 11 systems
- New antenna accessories for remote mounting and improved reception
- Half-rack size and metal chassis
- Rechargeable batteries deliver cost efficiency and up to 16 hours of runtime
- Adjustable transmitter gain to optimize audio signal
- Automatically moves away from interference without audio interruption
- RF back-channel for remote control of transmitter functions
- Automatic transmitter power-off to conserve battery life when transmitter is not in use

Quick Start for Single Receiver

To reduce set-up time, the transmitter and receiver automatically link to form an audio channel the first time they are powered on and never have to be linked again.
**Step 1**
Connect power supply to the receiver and plug cord into an AC power source. Connect the audio output to an amplifier or mixer.

![Diagram of power connection and audio output](image)

**Step 2**
Install charged transmitter batteries.

![Diagram of battery installation](image)

**Step 3**
Turn on the transmitter and receiver. The blue rf LED will flash while the transmitter and receiver form a link. The rf LED turns solid blue when the link has successfully formed.

![Diagram of LED status](image)
**Note:** The transmitter and receiver will remain linked for future usage. At power-up, the blue rf LED and transmitter LED will illuminate, skipping the linking step.

**Step 4**
Check the audio and adjust the gain if necessary.

**Receiver Controls and Connectors**

1. **1**
2. **2**
3. **3**

Front Panel
1. **RF Status LED**
   - ON = Linked transmitter is on.
   - Flashing = Searching for transmitter.
   - OFF = Linked transmitter off or transmitter unlinked.

2. **Group Button**
   Press and hold for two seconds to enable manual group edit.

3. **Data Sync LED**
   - ON = Data sync is on (receiver connected to GLX-D Frequency Manager).
   - Flashing = Searching for frequencies.
   - OFF = Data sync is off (receiver not connected to GLX-D Frequency Manager).

4. **Link Button**
   Press to manually link receiver to a transmitter or to activate the remote ID function.

5. **Channel**
   - Press to start a channel scan.
   - Press and hold for two seconds to enable manual channel edit.

6. **LCD Screen**
   Displays receiver and transmitter status.

7. **Gain Buttons**
   Press to increase or decrease transmitter gain in 1 dB increments.

8. **Battery Charging Indicator**
   Illuminates when battery is in charging bay:
   - Red = Battery charging.
   - Green Flashing = Battery charge at 90%.
   - Green = Battery charged.
   - Amber Flashing = Charging error, replace battery.

9. **Battery Charging Bay**
   Charges transmitter battery if receiver is plugged in to power outlet.

10. **Power Button**
    Powers the unit on and off.

11. **Antenna**
    Two antennas per receiver. Antennas pick up the signal from the transmitter.
⑫ Power Supply Jack
Connect the supplied 15 V DC external power supply.

⑬ Firmware Update
Connect to computer to download firmware updates.

⑭ Mic/Line Switch
Sets XLR output level to microphone or line level.

⑮ XLR Audio Output
Supplies microphone-level or line-level audio output.

⑯ Inst/Aux Out
TRS ¼” (6.35mm) audio output. Connect to mixers, recorders, and amplifiers.

Receiver Screen
① Group
Displays the selected group.

② Channel
Displays the selected channel.

③ Transmitter Battery Runtime
Displays remaining battery life in hours and minutes.
Alternatively displays the following battery status:
• CALC = battery life calculation
• Lo = battery life less than 15 minutes
• Err = replace battery

④ Audio Meter
Indicates audio signal level and peaks.

⑤ Gain
Displays transmitter gain settings (dB).

⑥ OL Indicator
Indicates audio overload, reduce gain.

⑦ Transmitter Locked
Displayed when linked transmitter controls are locked.

⑧ Scanning
Indicates a scan is in progress.

⑨ Auto
Indicates that the selected group has backup channels available.

Transmitters
① Antenna
Carries wireless signal.

② Status LED
LED color and state indicate transmitter status.
3 Power Switch
Turns the transmitter on/off.

4 TA4M Input Jack
Connects to a 4-Pin mini connector (TA4F) microphone or instrument cable.

5 Micro USB Charging Port
Connect to USB battery charger.

6 Link Button
- Press and hold within 5 seconds of power-on to manually link with receiver
- Press momentarily to activate Remote ID function

7 Battery Compartment
Holds 1 Shure rechargeable battery.

8 Microphone Cartridge
GLXD-2 transmitter models are available with the following cartridge types: SM58, Beta 58, SM86, Beta 87A.

Transmitter Status LED
LED is green during normal operation.

LED color or flashing indicates a change in transmitter status as shown in the following table:

<table>
<thead>
<tr>
<th>Color</th>
<th>State</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Flashing (slow)</td>
<td>transmitter attempting relink with receiver</td>
</tr>
<tr>

<td>Flashing (fast)</td>
<td>unlinked transmitter searching for receiver</td>
</tr>
<tr>
<td></td>
<td>Flashes 3 times</td>
<td>indicates locked transmitter when power switch is pressed</td>
</tr>
<tr>
<td>Red</td>
<td>On</td>
<td>battery life &lt; 1 hour</td>
</tr>
<tr>
<td></td>
<td>Flashing</td>
<td>battery life &lt; 30 minutes</td>
</tr>
<tr>
<td>Red/Green</td>
<td>Flashing</td>
<td>remote ID active</td>
</tr>
<tr>
<td>Amber</td>
<td>Flashing</td>
<td>battery error, replace battery</td>
</tr>
</tbody>
</table>

Wearing the Bodypack Transmitter
Clip the transmitter to a belt or slide a guitar strap through the transmitter clip as shown.

For best results, the belt should be pressed against the base of the clip.

Wearing the Headworn Microphone
- Position the headworn microphone 13 mm (1/2 in.) from the corner of your mouth.
- Position lavalier and headworn microphones so that clothing, jewelry, or other items do not bump or rub against the microphone.

Correct Microphone Placement
- Hold the microphone within 12 inches from the sound source.
- For a warmer sound with increased bass presence, move the microphone closer to the sound source.
- Do not cover grille with hand.
Batteries and Charging
GLX-D transmitters are powered by Shure SB902 lithium-ion rechargeable
batteries. Advanced battery chemistry maximizes runtimes with zero memory
effects, eliminating the need to discharge batteries prior to charging.

When not in use, recommended battery storage temperature is 10°C (50°F)
to 25°C (77°F).

Note: The transmitter will not pass RF or audio signals when connected to
the charging cable.

The following battery charging options are available:

Receiver Charging Bay
The receiver's built-in charging bay will charge transmitter batteries when
receiver is plugged in to power outlet.
1. Insert the battery into the charging bay.
2. Monitor the battery charging indicator on the front panel.

Charging from an AC Power Source
1. Plug the charging cable into the charging port on the transmitter.
2. Plug the charging cable into an AC power source.

Charging from a USB Port
1. Plug the USB charging cable into the charging port on the transmitter.
2. Plug the cable into a standard USB port.

LED Status During Charging
The following LED states indicate battery status when the transmitter is
connected to a charger:
- Green = charging complete
- Green Flashing = battery charge > 90%
- Red = battery charging
- Amber Flashing = battery error, replace battery

Installing Transmitter Batteries
### Bodypack Transmitter
1. Move the locking lever to the open position and slide the battery door open.
2. Place the battery into the transmitter.
3. Close the battery door and slide the latch to lock.

### Handheld Transmitter
1. Unscrew and remove the battery cover.
2. Place the battery into the transmitter.
3. Replace and tighten the battery cover.

### Charging Times and Transmitter Runtimes
Use the following table to determine approximate battery runtime based on the duration of charging time. Times shown are in hours and minutes. GLX-D transmitters automatically power-off after approximately 1 hour to conserve battery life if the signal from a linked receiver is not detected.

<table>
<thead>
<tr>
<th>Receiver Bay or AC Power Source Charging</th>
<th>USB Connection Charging</th>
<th>Transmitter Runtime</th>
</tr>
</thead>
<tbody>
<tr>
<td>0:15</td>
<td>0:30</td>
<td>up to 1:30</td>
</tr>
<tr>
<td>0:30</td>
<td>1:00</td>
<td>up to 3:00</td>
</tr>
<tr>
<td>1:00</td>
<td>2:00</td>
<td>up to 6:00</td>
</tr>
<tr>
<td>3:00</td>
<td>4:00</td>
<td>up to 16:00*</td>
</tr>
</tbody>
</table>

*Storage time or excessive heat will reduce maximum runtime.

**Note:** If receiver is powered off and remains plugged in, battery will continue charging.

### Important Tips for Care and Storage of Shure Rechargeable Batteries
Proper care and storage of Shure batteries results in reliable performance and ensures a long lifetime.
- Always store batteries and transmitters at room temperature.
- Ideally, batteries should be charged to approximately 40% of capacity for long-term storage.
- During storage, check batteries every 6 months and recharge to 40% of capacity as needed.

### 2.4 GHz Spectrum Overview
GLX-D operates within the 2.4GHz ISM band which is utilized by Wi-Fi, Bluetooth, and other wireless devices. The benefit of 2.4GHz is that it’s a global band that can be used anywhere in the world, license free.

### Overcoming the Challenges of 2.4 GHz
The challenge of 2.4 GHz is that Wi-Fi traffic can be unpredictable. GLX-D meets these challenges in the following ways:
- Prioritizes and transmits on the best three frequencies per channel (choosing from a pool of six frequencies across the 2.4 GHz band)
Seamlessly moves away from interference to backup frequencies without audio interruption

Optional GLX-D Frequency Manager improves RF reliability for systems with more than two receivers

Continuously scans during usage to rank all frequencies (both current and backup frequencies)

Antenna mounting accessories and directional antennas (available separately) help reduce transmitter-to-antenna distance and connect to antenna splitter

Coexisting with Wi-Fi

If you plan to use Wi-Fi during a performance, turn on Wi-Fi devices prior to turning on GLX-D and scanning for the best channel. GLX-D detects and avoids other Wi-Fi traffic by scanning the entire 2.4 GHz environment and selecting the three best frequencies to transmit on. This method avoids Wi-Fi signals and results in reliable performance for your GLX-D wireless system.

“Bursting” Wi-Fi is harder to detect as it is periodic; however, because GLX-D only repeats the most important information, even bursts at very high levels don’t have an effect on your audio performance.

Challenging Wireless Environments

Some environments are more difficult than others for 2.4 GHz wireless system performance. Additionally, body absorption has a greater impact in the 2.4 GHz spectrum compared to the UHF spectrum. The simplest solution in many cases is to reduce transmitter-to-receiver distance by placing receivers on the stage with a clear line of sight. You can also mount antennas remotely using Shure directional antennas to reduce transmitter-to-antenna distance.

Challenging environments include:

- Areas with few reflective surfaces such as:
  - Outdoors
  - Buildings with very high ceilings
- Three or more GLXD4R receivers in use and not connected to a GLX-D Frequency Manager
- Areas with a strong Wi-Fi presence
- 2.4 GHz systems from other manufacturers in use

Note: Unlike analog TV band wireless system which typically use the same type of transmissions across manufacturers, all 2.4 GHz wireless currently on the market use different variations of wireless transmission. These differences make it more difficult to mix and match 2.4 GHz systems from multiple manufacturers, as can be done with TV band wireless solutions.

Tips to Improve Wireless System Performance

If you encounter interference or dropouts, try the following suggestions:

1. Place receiver at least 3 meters (10 feet) away from Wi-Fi access points, computers, or other active 2.4 GHz sources.
   - Avoid heavy Wi-Fi traffic activities such as downloading large files or viewing a movie.
   - Turn on any Wi-Fi prior to turning on GLX-D and scanning for the best channel.
2. Reduce transmitter-to-receiver distance by placing receivers on stage or above the audience with a clear line of sight to the transmitter.
   - Move receiver to the top of the equipment rack for a clear line of sight.
   - Mount antennas remotely to place closer to transmitters and improve RF reliability if receivers cannot be moved closer.
   - Make sure people do not block the line of sight between receiver and transmitter.
Additional Tips

- Do not place competitive 2.4 GHz receivers near GLXD4R receivers.
- Connect more than two GLXD4R receivers to a GLX-D Frequency Manager to improve RF reliability.
- Scan for the best available channel by pressing the channel button.
- Keep transmitters more than 2 meters (6 feet) apart. This is less critical with shorter receiver-to-transmitter distances or if receivers are connected to a GLX-D Frequency Manager.
  
  **Note:** If transmitters are within 6 inches of non-GLX-D transmitters or microphone cartridges, audible noise is possible.
- Move transmitter and receiver away from metal or other dense materials.
- During sound check, mark trouble spots and ask performers to avoid those areas.
- If there is a strong source of Wi-Fi and you specifically want to use frequencies within that Wi-Fi channel, use the following Group/Channel combinations (best option listed first):
  - **Wi-Fi 1:** Group 3/Channel 8, Group 3/Channel 4
  - **Wi-Fi 6:** Group 3/Channel 7, Group 3/Channel 5
  - **Wi-Fi 11:** Group 3/Channel 2, Group 3/Channel 1

Remote Antenna Placement

Follow these guidelines when mounting antennas remotely:

- Reduce distance between transmitter and antenna.
- Mount antennas farther from each other to improve performance.
- Position antennas so there is nothing obstructing the line of sight to the transmitter, including the audience.
- Keep antennas away from metal objects and any other antennas.
- Use only low-loss reverse SMA cable to avoid poor RF signal.
- Consult cable's specifications and calculate signal loss for desired cable run.
- Use one continuous length of cable from the antenna to the receiver to increase signal reliability.
- Always perform a walk-around test to verify coverage before using a wireless system during a speech or performance. Experiment with antenna placement to find the optimum location. If necessary, mark any trouble spots and ask presenters or performers to avoid those areas.

Multiple Receiver Systems

To run more than two receivers at the same time, the GLX-D Frequency Manager is recommended to improve RF reliability.

However, you can run multiple receivers without the frequency manager. Select the group by determining the total number of receivers in your system (channel count). All receivers in the system must be set to the same group.

<table>
<thead>
<tr>
<th>Group</th>
<th>Channel Count (Number of Receivers)</th>
<th>Number of Backup Frequencies Per Channel</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Up to 4</td>
<td>3</td>
<td>Initial factory setting.</td>
</tr>
<tr>
<td>2</td>
<td>Up to 5*</td>
<td>3</td>
<td>Best multi-channel group if you experience interference.</td>
</tr>
</tbody>
</table>
### Setting Up Receivers and Transmitters

**Note:** Before beginning, turn off all receivers and transmitters. Turn on and set up each receiver/transmitter pair individually to prevent cross-linking.

1. Turn on the first receiver.
2. Press and hold the **group** button to select a group (if necessary) or if the group is already set, press the **channel** button to scan for the best available channel.
3. Turn on the first transmitter. The **rf** LED turns solid blue when a link is established.

Repeat steps 1-3 for each additional receiver and transmitter. Remember to set each receiver to the same group.

See GLX-D Frequency Manager guide for setting up receivers and transmitters when connected to the frequency manager.

**Note:** Dashes appearing on the group and channel display during a channel scan indicate that frequencies are not available in the selected group. Choose a group that supports more receivers and repeat set-up steps.

### Manually Linking a Transmitter to a Receiver

Use the manual linking option to change the transmitter linked to a receiver. A common use for manual linking is changing the linked transmitter from a bodypack type to a handheld type.

1. Turn on the transmitter: Within 5 seconds, press and hold the **LINK** button until the transmitter LED begins to flash green.
2. Press and hold the link button on the receiver: The blue **rf** LED will flash, and then remain on when the link has been established.
3. Test the audio to verify the link and adjust the gain if necessary.

### Combo Systems

A combo system is created by linking two transmitters to a single receiver. Only one transmitter can be active at a time to prevent cross interference. Gain settings for each transmitter can be independently set and stored when the transmitter is active.

**Important!** Do not turn on and operate both linked transmitters at any time. Turn off both transmitters before beginning.

1. Press the **group** button to select a group. The receiver automatically scans the selected group to find the best available channel.
2. Turn on transmitter 1 and link it to the receiver. Adjust the gain, and then turn off the transmitter.
3. Turn on transmitter 2 and link it to the receiver. Adjust the gain, and then turn off the transmitter.

**Note:** A transmitter can only link to one GLX-D receiver at a time.

### Operation

#### Gain Adjustment

Use the gain buttons on the receiver to increase or decrease the gain of a linked transmitter:

- Turn on the linked transmitter and momentarily press the gain buttons to adjust the gain in 1 dB increments
- For faster gain adjustments, press and hold the gain buttons
- To replicate the output level of a guitar, unity gain is -18 dB for the ¼” output

**Tip:** Monitor the audio and observe the receiver audio meter level while adjusting the gain to prevent signal overload.

#### Locking and Unlocking the Controls

The controls of the receiver and transmitter can be locked to prevent accidental or unauthorized changes to settings.

**Note:** Locks are not affected by power cycles.
Locking the Receiver Controls
Simultaneously press and hold the group and channel buttons until LK appears on the LCD. Repeat to unlock.
- LK is displayed if a locked control is pressed
- UN is displayed momentarily to confirm the unlock command

Locking the Transmitter Power Switch
Starting with the transmitter set to off, press and hold the LINK button while turning on the transmitter. Continue to hold the link button until the lock icon appears on the receiver LCD. Repeat sequence to unlock.

Optionally, the transmitter power switch can be remotely locked from the receiver front panel:
Simultaneously press and hold the group and link buttons for approximately 2 seconds until the flashing lock icon appears on the receiver LCD. Repeat sequence to unlock.

Identifying Linked Transmitters and Receivers with Remote ID
Use the Remote ID feature to identify linked transmitter and receiver pairs in multiple receiver systems. When Remote ID is active, the receiver LCD will blink and display ID. The status LED of the corresponding transmitter will alternately flash red and green for approximately 45 seconds.
To activate Remote ID:
1. Momentarily press the link button on the transmitter or receiver.
2. The LCD of the linked receiver will blink and display ID and the status LED on the linked transmitter will flash red/green.

Manually Selecting a Group and Channel
Specific groups and channels can be assigned to the receiver instead of using the automatic scan function.
Note: Group 3 should only be used in controlled Wi-Fi environments to prevent interference from unexpected Wi-Fi devices.

Selecting a Group
1. Press and hold the group button for 2 seconds until the group display flashes.
2. Press the group button to scroll through the available groups.
3. The receiver will automatically save the selected group.

Selecting a Channel
1. Press and hold the channel button for 2 seconds until the channel display flashes.
2. Press the channel button to scroll through the available channels.
3. The receiver will automatically save the selected channel.

Note: A double dash symbol -- displayed on the receiver screen during a channel scan indicates that there are no available channels within the selected group. Choose a group with more channels and repeat set up steps.

Firmware
Firmware is embedded software in each component that controls functionality. Periodically, new versions of firmware are developed to incorporate additional features and enhancements. To take advantage of design improvements, new versions of the firmware can be downloaded and installed using the Shure Update Utility tool.

Connect to the Computer
Connect the device to your computer using the USB to Micro USB cable supplied with your GLX-D system.
Rack-Mounting Instructions
Use the supplied mounting hardware to install the receiver in a standard 19 inch audio equipment rack.

### Resetting Components

Use the reset function if it is necessary to restore the transmitter or receiver to their factory settings.

**Resetting the Receiver**

Restores the receiver to the following factory settings:

- Gain level = default
- Controls = unlocked

Press and hold the link button while turning on the receiver power until the LCD displays RE.

**Note:** When reset is complete, the receiver will automatically initiate linking to search for a transmitter. Press and hold the transmitter link button within five seconds of powering-on to complete the link.

**Resetting the Transmitter**

Restores the transmitter to the following factory settings:

- Controls = unlocked

Press and hold the transmitter link button while turning on the transmitter until power LED goes off.

When the link button is released, the transmitter will automatically initiate linking to find an available receiver. Press the link button on an available receiver to relink.

### Specifications

#### Tuning Bandwidth

2400–2483.5 MHz

#### Working Range

<table>
<thead>
<tr>
<th></th>
<th>Indoor</th>
<th>Outdoor</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Up to 30 m (100 ft) typical, Up to 60 m (200 ft) maximum</td>
<td>Up to 20 m (65 ft) typical, Up to 50 m (165 ft) maximum</td>
</tr>
</tbody>
</table>

0 Note: Actual range depends on RF signal absorption, reflection and interference.

1 Note: Dependent on microphone type

#### Transmit Mode

Shure GLX-D proprietary digital

#### Audio Frequency Response

20 Hz – 20 kHz

#### Dynamic Range

120 dB, A-weighted
RF Sensitivity
-88 dBm, typical

Total Harmonic Distortion
0.2%, typical

RF Output Power
10 mW E.I.R.P. max

Operating Temperature Range
-18°C (0°F) to 57°C (135°F)

Storage Temperature Range
-29°C (-20°F) to 74°C (165°F)

Polarity
Positive pressure on microphone diaphragm (or positive voltage applied to tip of WA302 phone plug) produces positive voltage on pin 2 (with respect to pin 3 of low-impedance output) and the tip of the high impedance 1/4-inch output.

Battery Life
Up to 16 hours

Channel Count
9 typical, 11 maximum

GLXD1

Dimensions
90 x 65 x 23 mm (3.56 x 2.54 x 0.90 in.), H x W x D (without antenna)

Weight
132 g (4.7 oz.) without batteries

Power Requirements
3.7 V Rechargeable Li-Ion

Housing
Cast Metal, Black Powdercoat

Input Impedance
900 kΩ

RF Output Power
10 mW E.I.R.P. max

Transmitter Input

Connector
4-Pin male mini connector (TA4M)

Configuration
Unbalanced

Maximum Input Level
1 kHz at 1% THD
+8.4 dBV (7.5 Vp-p)

Antenna Type
Internal Monopole

Pin Assignments
TA4M

Certifications
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This wireless system operates in the globally available ISM band 2400 MHz to 2483.5 MHz. The operation does not require a user license.

Certified by IC in Canada under RSS-247 and RSS-GEN.

IC: 616A-GLXD1, 616A-GLXD2, 616A-GLXD4RZ2
Certified under FCC Part 15.

**FCC ID:** DD4GLXD1, DD4GLXD2, DD4GLXD4RZ2

**Industry Canada ICES-003 Compliance Label:** CAN ICES-3 (B)/NMB-3(B)

This device complies with Industry Canada license-exempt RSS standard(s). Operation of this device is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Meets essential requirements of the following European Directives:
- WEEE Directive 2002/96/EC, as amended by 2008/34/EC
- RoHS Directive 2011/65/EU

**Note:** Please follow your regional recycling scheme for batteries and electronic waste

Hereby, Shure Incorporated declares that the radio equipment is in compliance with Directive 2014/53/EU. The full text of the EU declaration of conformity is available at the following internet address: http://www.shure.com/eu-rome/compliance

**Information to the user**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

運用に際しての注意

この機器の使用周波数帯では、電子レンジ等の産業・科学・医療用機器のほか工場の製造ライン等で使用されている移動体識別用の構内無線局（免許を要する無線局）及び特定小電力無線局（免許を要しない無線局）並びにアマチュア無線局（免許を要する無線局）が運用されています。

1. この機器を使用する前に、近くで移動体識別用の構内無線局及び特定小電力無線局並びにアマチュア無線局が運用されていないことを確認して下さい。
