The new Shure Controlled Magnetic Microphones were specially designed for use in small, compact vacuum tube and transistor devices—wherever space is critical and reliability is essential. These models are equally adaptable to portable equipment or powered devices. These microphones are ideally suited for use with amplifiers, transmitters, dictating equipment, hearing aids, and all equipment where small size and weight are very important to the application.

The MC Series Microphones are rugged, magnetic units immune to varying conditions of heat and humidity. The stability of these microphones is assured by the same design principle used in Shure microphones for many years in military, mobile communication, dictating and recording applications.

Models MC11J and MC30J have an external mu-metal shield for use under unusual hum conditions. All models have excellent sensitivity in the frequency range most important for voice transmission. See Figures 1, 2, and 3.

**Guarantee:** This Shure product is guaranteed in normal use to be free from electrical and mechanical defects for a period of one year from the date of purchase. Please retain proof of purchase date. This guarantee includes all parts and labor.

**Shipping Instructions:** Carefully repack the unit and return it prepaid to the factory. If outside the United States, return the unit to your dealer or Authorized Shure Service Center for repair. The unit will be returned to you prepaid.
